

Instant Messaging for Ongoing Productivity

When the phone rings, you often have to stop what you're doing and lose focus of the task at hand. That's why in today's always-on, always-connected world, many employees and clients need additional methods of communications such as instant messaging. Instant messaging, otherwise known as chat, provides the same high level of interaction, but without the time constraints imposed by a phone call. Users can multi-task and stay productive.

With Star2Star's StarChat application, users can easily participate in a one-on-one or multi-party text chat. Group conversations make it simple to contact people you need to chat with often, and have written conversations in real time. And because all of your chats are stored in a searchable archive stored in the cloud, you always have access to them.

Here's how easy it is:

- Just select the StarChat option on the Star2Star Application Framework and open the address book
- Select a contact or search for the person you're trying to contact in the search bar located in the top left hand corner
- Highlight their name, select the chat option, and begin chatting
